

Overview of compatible lamps & luminaires

Status 03/2021

In this document, we offer you an overview of the lamps and lights that you can connect directly to the Bosch Smart Home System without additional devices (like bridge or hub).

1. LEDVANCE SMART+ – ZIGBEE 3.0

1.1. GENERAL INFORMATION

Please note that the Bosch Smart Home Controller can only communicate with ZigBee devices.

For security reasons, in addition, the Bosch Smart Home System supports only the newest version of the standard (ZigBee 3.0).

IMPORTANT NOTES

- ▶ The manufacturer relies on the new ZigBee 3.0 standard for the development and production of all new devices. Over the past few months, the production was changed over gradually.
- ▶ In the trade, you will therefore find remaining stocks of discontinued models as well as products with current packaging but without a QR code printed on them.
- ▶ When purchasing, therefore, make sure you only select products from the following list of compatible devices. Unfortunately, in some cases you may still receive a device without a QR code. In this case, please contact Ledvance Support to obtain information about product exchange

csc.uk@ledvance.com (for UK & Ireland)

Comparison of devices with and without QR code

1.2. LIST OF COMPATIBLE DEVICES

The now following devices are compatible with the Bosch Smart Home System.

These devices have a QR code on the device itself and on the enclosed manual, which you need for the integration in the Bosch Smart Home app.

	Product code	Description	Remarks
